Education

University of Alabama (2019–2023)

- B.S.: Computer Science, Minor: Mathematics

Achievements

- ACT: 34, SAT: 1540, National Merit Finalist

Employment

Microsoft (June 2023–Present)

- Software Engineer
- Working on the Kubernetes platform of an air-gapped Azure control plane. Owning a service mapping customer clusters as deployable locations in Azure. Also owning a service acting as a Kubernetes control plane for custom resources running on Windows.

Microsoft (May–August 2022)

- Software Engineering Intern
- Enabling Azure container registries to be run on edge environments. E.g. syncing Docker images between Azure cloud, on premises datacenters, and IoT devices.

WellSky (May–August 2021)

- Software Engineering Intern
- Wrote features and fixed bugs for the company's Blood Transfusion web application in .NET and Angular.

Integrity Inspired Solutions (May–August 2019)

- Software Engineering Intern
- Built a social media app for iOS and Android with Nativescript (Angular) and Firebase.

Atonix Digital (May–August 2018)

- Software Engineering Intern
- Created a data analysis page in .NET on the Asset360 platform for an IoT network of sensors, implementing various AWS technologies.

Projects

- PredictChain – Event prediction market built on the Solana blockchain. Rust smart contracts. Automated market maker prices tokens in liquidity pool.
- Fibre – A social, personalized clothes shopping feed. iOS app (Swift), Node.js/Express backend on Heroku, PostgreSQL database. Beta app supported 100s of users and was pitched to VCs.

Skills

Languages:

- C#, Go, Python, JavaScript

Miscellaneous:

- Kubernetes, Docker, Git
