Education

University of Alabama (2019–2023)

- B.S.: Computer Science, Minor: Mathematics
- National Merit Finalist (Full Scholarship)

Employment

Microsoft (Software Engineer)

June 2023–Present

- Built core Kubernetes platform capabilities for Azure Local’s disconnected operations, enabling Azure services to run in a private cloud.
- Designed and implemented the end-to-end extension and service runtime installation platform, enabling products including AI Foundry Local, RAG services, Microsoft 365 Local, and database workloads.
- Integrated Azure Custom Locations with Kubernetes by onboarding the service and developing a Windows-based Kubernetes API server emulator for managing custom resources.
- Designed and built a secure reverse proxy that terminates TLS, validates Proof-of-Possession (PoP) tokens, and serves as shared infrastructure for multiple platform services.
- Improved the performance and reliability of the custom operator framework responsible for infrastructure reconciliation, certificate management, service deployment, and platform upgrades.
- Contributed to core Linux and Windows platform infrastructure, including networking, virtual machines, and distributed service architecture.

Microsoft (Software Engineering Intern)

May–August 2022

- Developed features for Azure Container Registry to support disconnected edge deployments by synchronizing OCI artifacts between Azure, on-premises datacenters, and IoT environments.

WellSky (Software Engineering Intern)

May–August 2021

- Developed features and resolved production issues for a healthcare web application using .NET, C#, SQL Server, and Angular.

Integrity Inspired Solutions (Software Engineering Intern)

May–August 2019

- Built a cross-platform iOS and Android social media application using NativeScript (Angular) and Firebase.

Atonix Digital (Software Engineering Intern)

May–August 2018

- Developed data analytics features for the Asset360 industrial IoT platform using .NET and AWS cloud services.

Projects

- PredictChain – Event prediction market built on the Solana blockchain. Rust smart contracts. Automated market maker prices tokens in liquidity pool.
- Fibre – A social, personalized clothes shopping feed. iOS app (Swift), Node.js/Express backend on Heroku, PostgreSQL database. Beta app supported 100s of users and was pitched to VCs.

Skills

Languages

- Go, C#, Python, JavaScript/TypeScript, SQL

Infrastructure & Platforms

- Kubernetes, Docker, Linux, Windows, Virtual Machines, Distributed Systems, Operators/Controllers, Networking, REST APIs
